Hello.

I recently wanted to play Renegade again, but I keep having this message pop up after I try joining a server (after clicking Renegade on Renguard) - "Set working folder and try again". I don't know if it's Renguard itself... I tried googling this problem. One forum said to boot up Rebuild.exe or something in the data folder - but this file was not in my Data folder at all. Any suggestions?

Thank you.

Uni-stall renguard

- 1)it is old/outdated
- 2)it no longer works like it should
- 3)always breaks
- 4)BIATCH takes care what renguard doesn't
- 5)bypassable

best bet delete it

Unless you want to play on n00bstories which overall has the most amount of TP i've seen on renegade at present

Try using game.exe and game2.exe directly from the folder where the game is installed and see if this works.
