I got on SACNR today and it lagged like no fucking tomorrow with
ping at 700+ (usually 70-150) webpages seem to load without trouble
but I've tried games like BTD4 which kept crashing because i kept
having issues with site communication. Hulus page takes 2 or 3
refreshes to load correctly and the AETV website wont load at all.
Videos work fine after I actually get the website to load. This is
only happening on ONE computer not the other two the internet is
connected to. I have a WIFI connection. No changes have been made
to the USB receivers (for lack of a better word) position, and it
is fully in the USB port. So anyone know whats up?

Edit: Restarting works for about 5 to 10 minutes before the problems start up again

Edit: All 3 computers are having the same issues just not to the extent of the one im on now

edit: Solved was ISP issue

Might be a virus sleeping 5-10 minutes before it begins using (most) of your Internet connection.
Oh and did you try using another WLAN card/USB stick?
