ok so first of all i was running ren on 3.4.4. with both core patches and had a lot of skins along with a custom hud. i install 4.0 and it goes smoothly until i actually launch the game. it loads to a black screen and constantly makes this "ding" sound and ctrl alt del only works for a couple seconds until the black loading screen takes over. im a little confused as to what was happening as there weren't any error messages or alerts or anything. i have vista sp 1 x64 if that makes any difference.

anyways i'm just gonna uninstall ren and i'll apply 4.0 on the clean install. i'll repost after i'm done

Could you look for crashdumps and post those? Also, if you want to have this bug fixed, uninstalling is not the best option. It's only a workaround...

well it seems my only crashdumps are from before i installed 4.0..... the most recent one is on sunday lol. and also i can't seem to uninstall ren. i click on the uninst.exe and uninstll.exe and it says it cannot find the game directory.

The 4.0 crashdumps are stored in the
C:\Users\YOUR_WINDOWS_USERNAME\Documents\Renegade\Client\debug folder.

thanks iran! and holy cow do i have a lot of them! 110 to be exact... though they're all in .dmp so how do i open them?

edit: i opened dllload.txt and got the message

[tt.dll] Failed to load, error 998. Invalid access to memory location.

[scripts.dll] Failed to load, error 998. Invalid access to memory location.

repeating about seven times..... if that helps

uploading the most recent crash dumps would probably be more helpful.

Try zipping them up. Right click the .dmp file and press on "Send to" -> "Compressed (zip) folder".
