Where is this enabled? I can't set my V key to my left side mouse buttons.

Then explain why most "game"-mice have 5 buttons?
Left, middle, right button + 2 on the sides for previous/next or other actions.

I too was wondering where this new support actually comes into play. I too wanted to reconfigure free aim (v) to my side mouse button but it wouldn't take.

I have a Razer DeatherAdder in case that helps.

Doesn't the software in your mouse let you assign mouse buttons to key presses? That's how I do it most of the time with my Logitech G700.

Another thing you could do is assign the "Middle" mouse button as Free Aim's secondary binding.

Never thought it was possible, I just checked the Razer driver software and that is an option. I'm going to test it right now.

Logitech's mouse software doesn't allow me to assign anything to the back/forward keys on the left, which is where I wanted to assign my keys to begin with. Doesn't really help me here.

I have fixed this issue and the fix will be in the next build.
