Basically as the title states, some Stock Rene maps don'twork properly when joining a server that runs TT server-side.

Could someone possibly upload the Stock rene maps so that we can re-download them if any glitches occur?

Bit more info: This only happens upon joining a TT server, you get some weird message that states that the server doesn't have the said map installed and they don't provide it for download.

Thankyou Lone0001, I forgot that you had these maps uploaded.

For anyone else: http://lone0001.ca/cncdownloads

Thanks again.

Actually the errors I get with half the maps running on a TT server from the Uber pack is that the spawn points are below the friggin map!
