Hello, I recently installed the new scripts, and now whenever I try to play Renegade I get an error:
"The procedure entry point
?CheckMemoryManagerConfiguration@@YAXH>@Z could not be
located in the dynamic link library MemoryManager.dll."
Needless to say, this is very upsetting. Renegade is the only video game I play, and I love it. I
don't know much about computers, so that error text may as well be Greek. All I know is that I do
have the MemoryManager.dll file. I tried uninstalling and reinstalling Renegade, but no dice. I
have attached a screen shot of my troubles. Does anyone know how to fix this? Thank you in
advance.

It sounds like your memorymanager.dll was somehow corrupted. I have attached mine. Please replace your version with mine and see if it works then.

Thank you for trying. I replaced my file, and I am now getting a similar error, but the text is a bit different. I have attached a screen shot of the new message.

Hm, can you please contact me via IRC (irc.blackintel.org or irc.n00bstories.com, #blackintel) or IM (see my forum profile)?

Thanks, but I don't have IRC or any instant messaging service. I could download one if I really needed to. For the time being, I have re-uninstalled renegade and re-re-installed it. I downloaded 1.037 and scripts 3.4.4. The game runs fine now, but I have to have my data CD in. I tried to find the no-CD crack, but all I can find via Google is that it should have been included in 1.037, OR cracks that force me to download renguard... and I would rather just keep using my data CD than get renguard. Any suggestions?

http://ren.game-maps.net/?act=view&id=332

You'll have to rename it to game.exe (delete or rename the old one).

Though it would have been great for you to help StealthEye solve this issue.

It would be great if you could install some IM service. But first, try to reinstall TT and see if it gives the same error. (You may copy your Renegade directory so that you can still play if it fails again.)

Then either you did not uninstall TT completely, or you did not install RR correctly.

OK- sorry it took me a long time to respond. I tried the no CD crack cmatt42 suggested, but it didn't work. I believe I did it correctly, it just didn't work, so I reinstalled Renegade and played it using RR and the Data CD. A few minutes ago, I downloaded and installed the first link on this http://www.tiberiantechnologies.org/downloads page. It does not work. After I click he R that says Tiberian Technologies in the upper left, it insists I must have the CD and gives me two options: insert Data disk or cancel. I then tried to connect with RR, and it gave me an error message which I have attached here.

I installed MIRC, but I have only used IRC once before, a long time ago. I enter my nickname and alternate, but then I don't know what to do.

As far as I know, you can just cancel the message asking for the data disk and play normally. The data disk is only necessary for seeing the single player and intro movies. It it quits after that, it either does not run TT or it crashes immediately.

For mIRC, I don't use it myself, but from what I remember: if you run it you should get some main window and if I recall correctly some options window (where you typed your nick and alt nick). Close that options window so that you only have the main window active and type the following in the command bar at the bottom, you may need to wait a few seconds after the first one to settle down:

/server irc.blackintel.org
/join #tt

The window should change and show the users in the channel, one of them would normally be me. Be sure to type my name so that I'll notice you want my attention.

If I click cancel it takes me to the renegade game screen with the options single player, multiplay Internet, multiplay LAN, multiplayer practice, options, and quit. I tried clicking on multiplay Internet, but it then has me choose in between Westwood and Gamespy. RR is better than either of those.

Which IRC client do you use?/which is easiest?

In that case, everything seems to be working as expected. Combining RR and TT is not supported. Yet, the RR launcher -may- work if you uncheck the "with Resurrection" checkbox. As far as I know, the RR launcher is just an alternative gamespy browser. There are similar ones that work with TT and which have been named in similar topics (RenList was one, if I recall correctly).

I use XChat-WDK; I don't know if it's particularly easier though.

OK, I uninstalled RR and now when I click on the launcher it gives me the attached error. This is

---

similar to the error in the OP.

edit- should i follow error instructions and reinstall ren.?

Reinstall TT after uninstalling RR. The RR uninstaller may have caused trouble.
