my server crashed on pure virtual function

i flew with an apache trough the veh dropoff animation (like in crate)

I believe that's a known issue and, last I heard, on the WONTFIX list because it's so rare that it happens...

Quote:[WONTFIX] - If you purchase a transport and hover and get hit by the C130 you get "gameplay pending". here

Not 100% the same, but probably the same underlying problem since both are linked to flying through cinematics.

It sounds much more severe if the server crashes so I think we should look into this one. Added to the bug tracker. Is the crashdump available robbyke?

no i dont think so but ill go check it

no i dont have a crashdump of that one

perhaps its this one but its stack overflow so i doubt it

That one is something in the lua plugin. I recall seeing a similar dump before so I guess it's known/fixed.

if im testing again ill try to get a crash with the animation again

should be easy as it was just flying trough the transport heli when it dropped of the veh

Tried it a few times. I can only get it to give the "gameplay pending" as reported earlier (not sure what causes that either, but I don't think it's very important). The server does not crash for me.
