It seems that you lost connection and that it was not properly handled and instead crashed. Not sure why though.

Maybe you can shed some insight into these crash dumps.

It appears that Spectate.dll may have been the cause of a few of them but I cannot be entirely sure.

I get the feeling that it may be one of Iran's plugins occasionally causing the crashes, even if it says it is crashing in tt.dll, but I don't know which one as I'm not around when it crashes.

Unless someone can give me an update on any of these...

EDIT: Raven muted someone just before the last crash today.

Some of the crashdumps are related to the server cConnection becoming NULL. This should not be possible unless the server was somehow requested to exit (and then it should still not become NULL in the place where it happened in the crashdump, so it seems something mistakenly writes to that location).

Most of the crashdumps are in what seems to be a custom version of scripts.dll, so I cannot debug those. Are you indeed running a custom scripts.dll, and do you have the corresponding

.pdb to debug it?

Subject: Re: Server Crashdump

[View Forum Message](#) <> [Reply to Message](#)

We are in fact running a custom scripts.dll however the changes are quite minor and shouldn't be affecting that at all...

That being said I'll look into it.

Thanks for your time.

Most of the crashdumps are in what seems to be a custom version of scripts.dll, so I cannot debug those. Are you indeed running a custom scripts.dll, and do you have the corresponding .pdb to debug it?

I handed off to them the custom scripts.dll but how does my changes affect "connection"? The changes are very minor.

- Editing vehicle shells to be Medium armor and removing the BLAMO effect
- Adding host messages for building kills
- Edited the gamelog code in gmlog.cpp to have spaced out message prefixes
- Added an !rweap command that allows you to remove a selected weapon from your weapon bag

Other than that, it's completely stock SSGM.

Could another possibility be that a custom BRenBot plugin caused the server to exit?

[View Forum Message](#) <> [Reply to Message](#)

There are various ways how custom code could affect this:

- It could write to an invalid memory location due to an error, which coincidentally always happens to be the server's cConnection.
- It could crash in TT scripts.dll code, but because you have a custom version I cannot see where and therefore cannot debug it properly.
- It could do something wrong elsewhere, but only crash when executing some scripts.dll code. For example, if The_Game() is corrupted somehow and you call The_Game()->blah in your scripts, then it would crash in your code even if your code is not the cause. Knowing where it crashed in your code would help to debug it, however.
- There could be two issues, one in your code (half of the crashdumps) and one in the TT connection stuff (other half of the crashdumps).

Either way, it's hard to tell for me because I don't have your scripts.pdb.

Fixed. You can use one of the following workarounds:

1. Stop sending data to the gamelog TCP port (it's supposed to execute this data as console commands, but it seems that this is unreliable atm). Or

2. Replace the SSGMGameLog::Think in your scripts.dll with the code in the spoiler tag and recompile it.

```
Toggle Spoilervoid SSGMGameLog::Think()
{
    SOCKET so = accept(s,NULL,NULL);
    if (so != INVALID_SOCKET)
    {
        Connection *c = new Connection;
        c->cbufferFilled = 0;
        c->socket = so;
        c->cbuffer[_countof(c->cbuffer)-1] = '\0';
        Connections.Add(c);
    }
    for (int i = 0; i < Connections.Count(); ++i)
    {
        int chars_read = recv(Connections[i]->socket, Connections[i]->cbuffer +
Connections[i]->cbufferFilled, _countof(Connections[i]->cbuffer)-1 - Connections[i]->cbufferFilled,
0);
        if (chars_read == 0 || (chars_read == SOCKET_ERROR && WSAGetLastError() !=
WSAEWOULDBLOCK)) // Graceful close or error. Note that if the buffer is full, 0 bytes are read,
and this is interpreted as a graceful close too!
        {
            closesocket(Connections[i]->socket);
            Connections.Delete(Connections[i]);
        }
        else if (chars_read > 0) // Data received
        {
            char* lineStartPos = Connections[i]->cbuffer;
            char* endPos = Connections[i]->cbuffer + Connections[i]->cbufferFilled + chars_read;
            for (;;)
            {
                TT_ASSERT(endPos >= lineStartPos);
                char* lineEndPos = (char*)memchr(lineStartPos, '\n', endPos - lineStartPos);
                if (!lineEndPos) break;
                *lineEndPos = '\0';
                if (lineEndPos - lineStartPos > 0 && *(lineEndPos-1) == '\r') *(lineEndPos-1) = '\0'; // Remove
trailing \r if CRLF line endings are used.
                Console_Input(lineStartPos);
                lineStartPos = lineEndPos+1;
            }
            TT_ASSERT(endPos - lineStartPos >= 0);
            Connections[i]->cbufferFilled = endPos - lineStartPos;
            memmove(Connections[i]->cbuffer, lineStartPos, endPos - lineStartPos);
        }
    }
}
```

Subject: Re: Server Crashdump
Posted by [StealthEye](#) on Sun, 26 Aug 2012 23:22:21 GMT
[View Forum Message](#) <> [Reply to Message](#)

The scripts.dll does not match the crashdump.

I can't tell what the issue was based on this. I see traces of cmsgp and spectate, but that does not necessarily mean that those are the cause. The correct .dll might help.

Subject: Re: Server Crashdump
Posted by [Gen_Blacky](#) on Sun, 26 Aug 2012 23:48:04 GMT
[View Forum Message](#) <> [Reply to Message](#)

spectate plugin can cause a crash because of Send_Object_Update. Check if player is active and game obj exists.

Subject: Re: Server Crashdump
Posted by [raven](#) on Mon, 27 Aug 2012 00:22:58 GMT
[View Forum Message](#) <> [Reply to Message](#)

Odd, that's the exact build of scripts (and only build of scripts) that I had running on the server at the time of the crash.. nonetheless I think Blacky is right as there is no crash if I remove the Send_Object_Update() code.

Thanks guys.

I just committed this fix:

```
@ @ -168,10 +168,11 @ @ void Spectate(GameObject *obj,int id)
```

```
Commands->Set_Shield_Type(soldier,"Blamo");
```

```
Disarm_All_C4_Beacons(id);
```

```
for (SLNode<cPlayer>* PlayerIter = Get_Player_List()->Head(); (PlayerIter != NULL); PlayerIter = PlayerIter->Next())
```

```
{
```

```
cPlayer *p = PlayerIter->Data();
```

```
+ if (!p->Is_Active()) continue;
```

```
if (p->Get_Id() == id)
```

```
{
```

```
Send_Object_Update(obj,p->Get_Id());
```

```
}
```

```
else
```

Your bandwidth (bbo) seems to be set to 0, please check your server.ini and change it to something reasonable.

Subject: Re: Server Crashdump
Posted by [Ethenal](#) on Sat, 05 Jan 2013 17:46:31 GMT
[View Forum Message](#) <> [Reply to Message](#)

BandwidthUp = 150000000

:/ Btw, our bot manually does `!fds sbbo` <some ridiculously large number> at the start of every map (if it doesn't do that the kbps sits at like 20 with 50 players), yet that's our server.ini setting. Either the server.ini setting is too low (even though that shouldn't cause a bandwidth budget of zero) or there is a bug that is causing it not to be loaded.

EDIT: THIS:

Quote: Sat 12:00:31 (&Tiresias) `!fds set_bw_budget_out 9999999999`

If the bot DOESN'T do this, it lags TREMENDOUSLY until you do.

Subject: Re: Server Crashdump
Posted by [StealthEye](#) on Sat, 05 Jan 2013 21:01:45 GMT
[View Forum Message](#) <> [Reply to Message](#)

Those values are too high, which makes the `strtol` function that is used to parse them return 0. I think the maximum possible value 2147483647.

I don't see why the KBPS would be 20 for 50 players with a reasonable SBBO value, that's the real issue... Do you have any stats for this that I can look at to see what's going on? The ridiculous value possible helps because the bandwidth limit is disabled altogether due to divisions by zero or something.

Subject: Re: Server Crashdump
Posted by [Ethenal](#) on Sat, 05 Jan 2013 22:25:49 GMT
[View Forum Message](#) <> [Reply to Message](#)

Both of them are too high? Judging by that number, I assume it's the maximum int value these are bumping into. Is the bandwidth budget measured in bytes?

Subject: Re: Server Crashdump
Posted by [StealthEye](#) on Sat, 05 Jan 2013 23:38:45 GMT
[View Forum Message](#) <> [Reply to Message](#)

150000000 is fine, 999999999 is too high. It indeed uses a signed int. 150000000 should still allow a 375 KByte/s for 50 players, so it should definitely not go to 20. Perhaps it overflows somewhere...

Subject: Re: Server Crashdump
