Here. I can't tell you what I was doing at the time of the crash because I can't remember anything. Are all of these crashes I'm reporting similar in how they are caused?

All your crashes are in really weird places which suggests a hardware issue of some sort. Do other programs or games crash frequently on your computer?

The only game I have is Renegade. No other program/game has crashed other than Renegade.

Could you stresstest your hardware using OCCT? Minimum runtime I would say about 8 hours for the CPU and similar for the GPU.
