I got some strange things happen with my computer. It just don't want Renegade to work on it.

I got a disc renegade, and it was working normally. One day I reinstalled it and the problems started.

When I set all the settings, etc etc and press "Install", my renegade Crashes or it appears an error that the disc is out. But my disc is fine and working on other computers.

I tried to download Internet, Torrent, downloads but all of them got same situation. Thanks god I somehow found a Russian language renegade repack by MOPO3OB, but now I got +1 more problem. I can't install 4.0 for it As many things in my ren is in Russian, 4.0 thinks that are corrupted files and removes all that... So my ren gets corrupted and doesn't work. I am using 3.4.4 only and can't play nearly on any server.

Any idea how can I fix that problems? I got WindowsXP

P.S.

Everyone ask me that all the time so I'll reply right now:

- 1) No, I don't have the windows disc.
  - 2) No, I don't have enough money to buy a new computer.
-

Digging up old threads are we?

Anyhow, since you did, might as well answer it

If you have a valid serial you can attempt to activate it on Origin (you'll have to contact support most likely) and download it through there. If you're unable to do so, I'd say attempt another torrent.

I can't really think of any reason other than either a screwed up download/disc, which would be solved with a valid download, or a messed up system. If other things are acting weird as well I'd say a system reinstall would be your best bet but as long as it is only Renegade, I'm just assuming

it is a bad copy/download.

My cds (all like, what, four copies of Renegade + TFD I bought over the years?) all broke at some point or another, so for the past several years I've simply used torrents off of TPB with my valid TFD Renegade serial. I've installed Renegade so many times I have my serial memorized. If you have any problem finding an iso, there are plenty who know where to find one.
