Endless loading when trying to connect to the Rencorner marathon server, and then the error "Connection to the server is interrupted", for example, does not appear on other servers!The game includes Exodus co-op.

I do not use any third-party software or modifications. In short: A modern Windows 10 gaming computer has plenty of disk space, and I don't use antivirus software. It is always disabled. I had a similar problem before, it was the missing ttfs folder, but I solved this problem and played normally for a while, then abandoned Ren for 1-2 months and came back again, but I couldn't play because of this error.
