Try looking at all the other install problems posts in this forum first, then tell us which ones you've tried and why they didn't work. After that, I'm sure people will have more suggestions.

i might not have access to another machine to find this encrypted serial number it speaks of, is there anything else i may be able to do?

my system specs

1.4 GHz
512mb
60GB
32 bit s3 savage graphics card

I found another installer at one stage that didn't have all the fancy graphics. I think it may even have been on one of the Renegade CDs. I'll check when I get home from work, but you may be able to find it in the meantime. Post the location here if you do.

Found it!

Our "friends" at EA removed it from the westwood ftp site and put it on the EA ftp site instead. I guess no one has problems installing the game any more. :rolleyes:

ftp://ftp.ea.com/pub/westwood/RenegadeDebugInstaller2.zip

Give that a whirl.

I have this exact same problem with an extremely fast and up to date computer. I currently operate on Windows XP Home. I have tried both of the recommended downloads and neither work. The first one says there is an error and the second one loads up a blank screen and then cuts back to the desktop. I have been a long term user of the game on the same system while i

I know this may sound stupid, but i had this problem and it turned out to be my cd rewriter.It wasn`t reading certain types or file when i upgraded from ME to WIN2000. I borrowed an old cdrom drive to install game and it was fine. The game plays ok on re writer, just wouldn`t install. Exactly the same thing occured installing GENERALS. Give it a try.

This be basic but I will throw out a suggestion.

XP uses a heck of a lot ram, more so than ME. I had problems with a 512mb stick of ram that when I replaced it the game stopped crashing to desktop (ctd). Apparently there was something wrong in the upper reaches of the stick.

Can you try using a different stick and then try it? Swap it out and give it go.

An idea,

Yeah that is a very good point. It always worked on my older CD drive. I will give it a try and tell you if it works. Cheers.

They probably won't verify your screen name. You'll never get an email. Just play with it anyway.
