ok, ive made a ctf map and set it up using dante's ctf script, if i try and host it using the dedicated
server, it automatically shuts itself down after it finishes loading and keeps looping.

i removed the scripts and the map runs fine but without any flags, has anyone else had this
problem or know how to fix it? thanks.

check to make sure the w3d that you are using, and the flagid are present on the server, sounds
to me like you used an invalid flag model, which would make the FDS crash.

ah yeah i checked the map over in xcc mixer and the flag models hadn't exported with the map,
thanks
