I know a lot of people are asking for a FDS serial. I registered one along time ago and have no use for it. If someone wants it tell me their server specifications. Depending on the one i like the most i will give them my serial.

I would be VERY greatfull if I could use it.

My server is a 24-player modded Capture The Flag server. I use vloktboys script along with my own modifications to make it very fun to play.

The server runs on a 2MB line with no lag.

The server computers specs are:

2.4 GHZ P4
512MB DDR Memory
Windows 2000 Professional

Again, I would really appreciate this serial.
You can contact me if you need to via Private Message.

HaZarD26I don't need to see anymore, I like that one. I'm PMing you right now.

Thank you sooooo much... you porbablly dont know how much this means to me I've been looking for one of these serials for almost 6 months!

Thanks again

could u pm me the serial too. I dont think letting 2 or more ppl with the same serial stops u from running the server. My friends tried it before but then they lost the serial and i couldnt get it

Before you guys go about trying to con my serial out of him: 2 or more servers cant run on the same serial. I've tried. If you get it it's not gonna be a use to you because my server is the first one up and autorestarts in less that 30 seconds if connection is lost etc

BrianPRRwell to bad im running an AMD 64 Bit 3200+ 1024 RAM 3.5MB connection.. shoulda game me man.

Look into hosting a new game.. you dont want that big ole' 64-bit processor being wasted by using a 32 bit application.

I read that a 64-bit processor still yields performance gains for 32-bit applications because it is more efficient.

snipesimoI read that a 64-bit processor still yields performance gains for 32-bit applications because it is more efficient.

Still, he wouldnt be using the processor to its full potential.

No, but it would still yield a performance gain.

BrianPRRwell to bad im running an AMD 64 Bit 3200+ 1024 RAM 3.5MB connection.. shoulda game me man.

I'll list a couple reasons why I wouldn't consider it.

1. Never stated your operating sysem. I know Windows 2000 Professional is extremely stable.

2. It's not an AMD 64 Bit 3200+. It's an AMD Athlon 64 3200+.

3. He is going to run a CTF server, which I may be wrong, but you know nothing about.

4. Renegade isn't that resource demanding in game. Maybe for servers I don't know. When i alt+tab it says something like 90 megabytes.

5. You are new here, so am I, but i trust him more.

6. Use the server for a more demanding game like Half-Life 2 when it comes out or Unreal Tounament 2004.

I've said my peace
