I installed RenGuard today. Clicked Renegade, went through the RenGuard menu and started
Renegade. The screen where you choose single player, WOL, etc., is missing all of those titles
and there is nothing that you can even click on. Anyone know of a fix for this? I'd post a pic but I
need to either find a better site to upload a 1.4 meg file or make it smaller.

Uhhhh... that's not possible. We don't touch any renegade files except to rename game.exe to
game2.exe.

make sure you downloaded it from this renguard site and not from someone elses it might be
something else or migh contain a virus...Renguard doesn't remove a thing

I downloaded it right from the renguard site off the first server option. Here should be a pic of it.

Tell me if it doesn't work please

LOL thats blank allright. I dont know what to say other than its not RenGuards fault. As Crimson said all it does is rename game.exe to game2.exe and then RG becomes game.exe. It does not alter any of the game data files or textures etc.

Really strange.

This can happen when you've just installed the game and you fix it that way by restarting your computer.
